Let's GO Shopping

I am learning to recall the number with decades

Equipment: 10 shopping cards and 10 money cards.

How to Play: The object of the game is to collect the most pairs.

- Place all of the cards face down on the floor and mix them up.
- Play begins by the first player turning over two cards. If the price of the shopping item matches the amount of money on the money card then they have a pair. If not they turn the cards over and the next player has their turn.
- If a player gets a pair they may have another turn.
- Play continues until all cards have been matched correctly.
- The winner is the person who has the most pairs at the end of the game.
